

Contents

Contents	1
1 Vector Analysis	5
1.1 Vector Notation	5
1.2 The Vector Inner Product	8
1.3 The Vector Cross Product	12
1.4 Vector Triple Products	19
1.5 Vector Fields	22
1.6 Flux of a Vector Field	34
1.7 Important Integral Theorems	37
1.8 Cylindrical Coordinates	43
1.9 Spherical Coordinates	48
2 Electrostatics	55
2.1 Coulomb's Law	55
2.2 The Electric Field	61
2.3 Gauss's Law	69
2.4 The Electrostatic Field	77

3	Voltage and Capacitance	83
3.1	Potential Energy of Static Charges	83
3.2	Electric Potential Difference	90
3.3	Capacitance	98
3.4	Energy and Charge Density	101
3.5	Energy in Electric Fields	104
4	Electric Fields in Matter	111
4.1	Dielectrics	111
4.2	Bound Charges	115
4.3	Linear Dielectrics	120
4.4	The Displacement Field	125
4.5	Electrostatic Boundary Conditions	130
4.6	Energy in Dielectrics	133
4.7	The Clausius-Mossotti Equation	136
5	Magnetostatics	143
5.1	Current	143
5.2	Drude Theory of Conductivity	145
5.3	Resistance	150
5.4	The Biot-Savart Law	159
5.5	Magnetic Forces	164
5.6	The Velocity Selector	172
5.7	The Magnetic Moment	178
5.8	Ampère's Law	184
5.9	The Solenoid	189
6	Magnetic Fields in Matter	197
6.1	Magnetization	197
6.2	Bound Currents	200
6.3	Ampère's Law in Materials	202
6.4	Linear Media	205
6.5	Magnets	210

7	Faraday's Law	217
7.1	Magnetic Flux	217
7.2	Electromagnetic Induction	219
7.3	Induction in a Moving Conductor	223
7.4	Self Inductance	227
7.5	Lenz's Law	230
7.6	Energy in a Magnetic Field	235
7.7	Mutual Inductance	236
7.8	Magnetic Circuits	243
8	Maxwell's Equations	253
8.1	Displacement Current	253
8.2	The Wave Equation	259
8.3	Energy in E & M Waves	264
8.4	Maxwell's Equations in Materials	266
8.5	Maxwell's Equations and Conductors	270
8.6	Electric Dipole Radiation	274
	Appendices	281
A	Integral Formulas	281
B	Trigonometric Identities	284
C	Useful Relations	285
D	Relations Involving the Del Operator	286
E	Del in Curvilinear Coordinates	287
F	Physical Constants	288
G	INDEX	289
